

How to install the spring in a 915 shifter:

Security advice: please make sure that you wear eye- and hand protection.

Loosen the five allen bolts of the shifter and remove it from the car. Turn it upside down and carefully fix it in a vice or similar.

1. Remove the yellow clip (a)
2. Push the bolt a bit to the right (b)
3. Put the spring on the bolt with the ring slide
4. Push back the bolt into original position
5. Refit the yellow clip (a)
6. Use pliers (ideally vice-grip locking pliers) to take the other leg of the spring and push it into the final position. Make sure the hook is properly locked in (c)
